Syllabus represents a program of a course of study. It's a content plan of a course defining a level of study, the goal of the course and learning outcomes. Meanwhile, it provides a system approach to course and course development.

Lecture-Student Communication and also communication between a subject and an author is established via Syllabus in High Schools.

Syllabus Creation, its management tools and capabilities are considered in the given article with the help of a project management software program – MS Project. Syllabus is considered as an object in the form of project.

Therefore, for creating and managing a syllabus, as well as observing and analyzing its realization and further development, to use power tool as MS Project is quite effective.
